- 1300 lux light level
- 14,000 m<sup>3</sup>/hr airflow

**AQUA-DRY**  
Flash Off System

Compatible with Dalby Advanced Aqua-Dry Flash Off System.

*Extended height and length booths available*

## Dalby Genesis X Booth

The ORIGINAL tunnel airflow spray booth, the legendary Dalby X booth has for more than 15 years led the way in quality low cost refinishing. The New Genesis X booth adds to it's pedigree offering premium levels of quality & technology previously only associated with higher cost equipment.

The Genesis X booth provides operators with a fully functional spray booth/oven unit, purposely designed for use with water based paint systems which is economical to install, operate and maintain. With light levels of 1300 lux this modern technologically advanced tunnel airflow booth with rear extraction chest eliminates the need for disruptive site preparation work and underfloor extraction pits. The spacious booth cabin also incorporates a unique space saving, roof mounted plant design to maximise available workshop floorspace.

Efficient fully modulating gas burners provide uniform air temperatures during all modes of operation. Instantaneous mode selection is achieved with fast action pneumatic control dampers which permit continuous booth operation when switching between cycles. Coupled with fast air movement and our user friendly 'Push & Go' control system with built in Flash Off mode the Genesis X booth reduces flash off times for all compliant coatings and provides the ideal cost effective refinishing environment.

**AQUA-DRY**  
Flash Off System

Compatible with Dalby Advanced Aqua-Dry Flash Off System.

***Extended height and length booths available***
